Dear Hiring Manager,

My name is Gyasi Sutton, a Foreign Medical Graduate with a current provisional license in the United Kingdom. I completed my studies in Naples, Italy. I am an American Citizen who returned to the US to apply to a residency position during the match cycle of 2023 for specialization in Radiology. Indeed this position would be advantageous for my career goals. I received my Laurea Magistrale in Medicina e Chirurgia July 2020. I also finished a graduate public health degree with an epidemiology emphasis in December 2020.

During the completion of a Master's in Public Health, I was a peer reviewer for two open access journals, the International Journal of Translational Medical Research and Public Health and the International Journal of Maternal and Child Health, in which I disseminated and verified submitted research in various scientific and public health fields. I was also involved with grant writing projects for a non-profit public health company. This experience allowed exposure to research study and design, along with understanding the statistical methods used for the studies, as I had to verify the research. Soon after graduation, I entered an Artificial Intelligence Engineer boot camp using mostly python to discover intersections between clinical diagnosis and machine learning. I have recently been using deep learning methodologies in computer vision for image diagnosis, including X-ray, MRI, and CT scans with Pytorch, dataset creation, and dataset encryption/anonymization. I have an interest in computer vision and neurological diseases as well. I have knowledge and experience in SAS and other statistical analysis methods, and I hope to improve and develop skills in medical writing.

Previously, I was a former paramedic who saw a wide variety which allowed me to have the base clinical skills necessary to transition to a higher level of medical training. Soon after researching medical schools in Europe, I traveled to Italy to attend medical school and received clinical training while experiencing a different culture. This change, I believe, gave me the skills to become adaptable to any situation.

Thank you for taking the time to read and review my cover letter. In summary, I believe that my diverse set of skills, including training and experience in clinical diagnosis and treatment, epidemiology and statistical analysis and coding would qualify me for this opportunity and would be a great asset to your company. As you can see I my background in medicine, public health, and coding are a combination of skills that would allow increase production and accuracy to the team. I also recognize the opportunistic value of training with one of the leaders in the industry.

Sincerely,

Gyasi Atu Sutton
